SKILLS

- **Languages:** Core Java, C, Python
 - **Web Development:** HTML, CSS, JavaScript
 - **Tools & IDEs:** VS Code, PyCharm, Eclipse
 - **Databases:** MySQL, MongoDB
 - **Concepts:** OOP, Data Structures & Algorithms (DSA), Cybersecurity Fundamentals
 - **Soft Skills:** Project Management, Problem-Solving, Collaboration & Teamwork, Leadership, Time Management
-

EDUCATION

B.E Computer Science and Engineering (CGPA: 7.78)

Dec 2021 – May 2025

KNS Institute of Technology, affiliated with Visvesvaraya Technological University

WORK EXPERIENCE

Student Ambassador & Broadcast Producer

Dec 2024 – May 2026

The Esports Club (TEC) · Freelance, Bengaluru

- Served as TEC Spartan and Broadcast Producer, promoting the brand within college, city, and the gaming community; planned and executed on-campus events including product demos, gaming tournaments, and panel discussions.
- Collaborated with local gaming stores and venues to organize gaming showcase events, connecting with gamers in the city and building a growing community of brand enthusiasts.
- Engaged with the gaming community through online forums, social media, and live streaming platforms; developed essential skills in marketing, communication, leadership, and event broadcasting.

Intern | Rooman Technologies via NSDC

Sep 2024 – Feb 2025

- Completed an internship at Rooman Technologies as a Full-Stack Developer. Developed dynamic web applications, built responsive front-end components, integrated RESTful APIs, and managed MongoDB databases.
- Gained hands-on experience in industry-relevant technology through structured NSDC-certified training, enhancing technical proficiency and problem-solving skills.
- Worked on practical projects and real-world scenarios, applying theoretical knowledge to develop solutions aligned with current industry standards.
- Earned NSDC certification, validating nationally recognized skills and demonstrating readiness for advanced academic and professional challenges.

Foundations of Cybersecurity

Dec 2023

- Gained hands-on experience in core cybersecurity principles including cryptography, network security, risk management, and access control mechanisms.
- Analyzed real-world cyber threats and implemented basic defense strategies such as firewalls, intrusion detection systems, and secure password policies.
- Completed practical labs simulating cyber-attacks and defenses, enhancing skills in vulnerability assessment, threat mitigation, and incident response planning.

Societal Internship

Nov 2023 – Dec 2023

- Raised awareness on nutritional benefits of fruits by organizing interactive community workshops and school sessions, improving local health literacy.
- Collaborated with local fruit vendors and farmers to promote sustainable practices and reduce food waste, positively impacting both environmental and economic outcomes.

PROJECTS

Distracted Driver Behaviour Identification and Alert System Using Deep Learning

- Developed a real-time driver monitoring system using Convolutional Neural Networks (CNN) to classify distracted behaviors such as texting, drinking, talking, and hands off the wheel, achieving over 95% accuracy on benchmark datasets.
- Integrated deep learning models with OpenCV and real-time video processing to detect distractions and trigger immediate alerts (audio/visual), enhancing driver safety and responsiveness.
- Preprocessed and augmented thousands of labeled images to train robust deep learning models; fine-tuned model hyperparameters to reduce false positives and improve classification performance.

Hostel Management System

- Enhanced a web-based application aimed at automating hostel management tasks, including room allocation, tracking, and student record management, built using Java, MySQL, and HTML/CSS.
- Designed and implemented a relational database for efficient hostel management, optimizing data storage and retrieval for student records, room allocation, and fee tracking.
- Developed an interactive front-end interface linked to the database, enabling streamlined operations and real-time updates for administrators and students.

Agriculture Management System

- Designed and improved an agriculture management system aimed at optimizing farm operations by tracking crops and enabling farmers to sell products directly to customers, using HTML/CSS, XAMPP, and MySQL.
- Built a database-driven platform to manage crop details, farmer records, and resource allocation, improving accessibility and organization of agricultural data.
- Implemented user-friendly modules for data entry, report generation, and inventory tracking, streamlining agricultural management processes.

Motion Detection

- Designed and implemented a motion detection system using background subtraction and frame differencing techniques with OpenCV, enabling accurate real-time movement tracking in surveillance footage.
- Optimized motion detection pipeline to minimize false alarms by integrating contour analysis and dynamic thresholding, improving detection accuracy in varying lighting and environmental conditions.

RESEARCH PAPER

Distracted Driver Behaviour Identification and Alert System Using Deep Learning

ACHIEVEMENTS

- Successfully completed internship at Google, gaining hands-on experience in Foundations of Cybersecurity.
- Completed internship at IBM, contributed to Introduction to Cloud.
- Earned internship certificate from Rooman Technologies in Application Developer - Web & Mobile, demonstrating strong practical understanding and teamwork.
